## **CLAIMS**

What is claimed is:

(b)

- A method for transparency rendering in a graphics pipeline, comprising: collecting colored-transparency information from a plurality of depth layers in a scene to be rendered;
- storing the collected colored-transparency information in memory; and
- 5 (c) blending the colored transparency information from the depth layers in a predetermined order.
- 1 2. The method as recited in claim 1, wherein the colored-transparency 2 information is collected from at least two depth layers.
- 1 3. The method as recited in claim 1 wherein the colored-transparency information is stored in a plurality of texture maps.
- 1 4. The method as recited in claim 3, wherein each of the texture maps corresponds with one of the depth layers.
- 1 5. The method as recited in claim 4, wherein the texture maps are stored in memory.
- 1 6. The method as recited in claim 1, and further comprising rendering opaque objects in the scene.
- 7. The method as recited in claim 6, the opaque objects in the scene are rendered prior to blending the colored-transparency information therewith.
- 1 8. The method as recited in claim 1, wherein the memory includes a frame buffer.

10.	The method as recited in claim 1, wherein the colored-transparency
10.	The method as recited in claim 1, wherein the colored transportance
	The method as recited in claim 1, wherein the colored-transparency
	information is collected utilizing depth peeling.
11.	The method as recited in claim 10, wherein the depth peeling includes
	executing a first rendering pass for collecting colored-transparency
	information relating to a first depth layer, and executing additional rendering
	passes for collecting additional colored-transparency information relating to
	additional depth layers.
12.	The method as recited in claim 11, wherein the first rendering pass produces
	a shadow map relating to the first depth layer.
13	The method as recited in claim 11, wherein a shadow-mapping feature is
13.	enabled during the additional rendering passes for defining a previous depth
	layer.
14.	The method as recited in claim 11, wherein the additional rendering passes
	are taken from the same eye position from which the first rendering pass is
	taken.
15.	The method as recited in claim 1, wherein the colored-transparency
	information is collected utilizing depth peeling including executing a first
	\ .
	rendering pass for generating a shadow map from which first colored-

executing additional rendering passes with a shadow-mapping feature

enabled and from the same eye position from which the first rendering pass is

5

6

taken for collecting additional colored-transparency information relating to

7

8		additional depth layers.
1	16.	The method as recited in claim 15, wherein the additional colored-
2		transparency information relating to the additional depth layers is collected
3		by removing a portion of the scene associated with a previous depth layer.
1	17.	The method as recited in claim 16, wherein the additional colored-
2		transparency information relating to the additional depth layers is collected
3		by performing a test to determine which portion of the scene to remove.
1	18.	The method as recited in claim 17 wherein the test determines whether the
2		portion of the scene is behind the previous depth layer.
1	19.	The method as recited in claim 18, wherein the portion of the scene is
2		removed upon the test determining that the portion of the scene is behind the
3		previous depth layer.
1	20.	The method as recited in claim 19, wherein the test calculates a difference
2		between a previous z-value relating to the previous depth layer and a present
3		z-value relating to one of the additional depth layers.
1	21.	The method as recited in claim 20, wherein the portion of the scene is
2		removed upon no difference being calculated between the previous z-value
3		relating to the previous depth layer and the present z-value relating to one of
4		the additional depth layers.
1	22	The mosthed on resisted in claim 21 subspice the part has relative to 11 to 1
1	22.	The method as recited in claim 21, wherein the z-values relating to all depth
2		layers are produced with the same interpolation-related method for

improving an accuracy of the test.

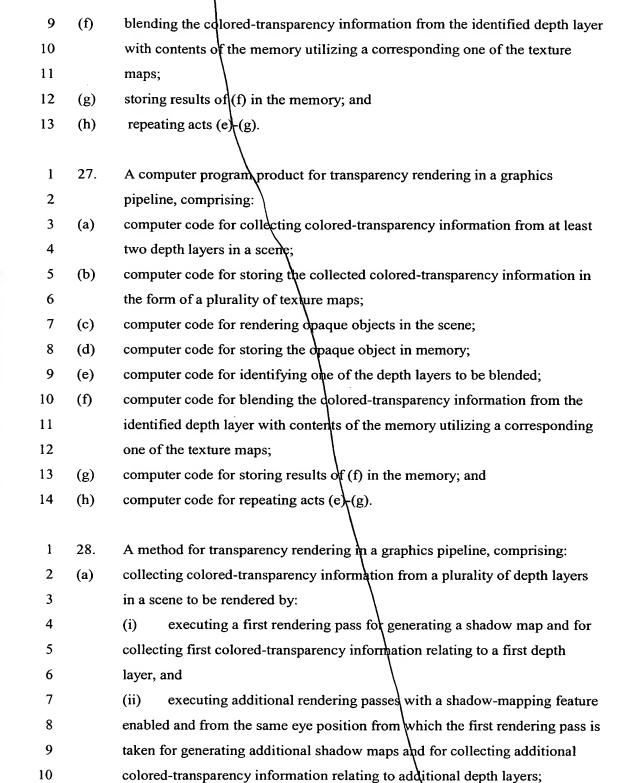

3

A computer program product for transparency rendering in a graphics

23.

1

2		pipeline, comprising:
3	(a)	computer code for collecting colored-transparency information from a
4		plurality of depth laxers in a scene to be rendered;
5	(b)	computer code for storing the collected colored-transparency information in
6		memory; and
7	(c)	computer code for blending the colored-transparency information from the
8		depth layers in a predetermined order.
1	24.	A system for transparency rendering in a graphics pipeline, comprising:
2	(a)	logic for collecting colored-transparency information from a plurality of
3		depth layers in a scene to be rendered;
4	(b)	memory for storing the collected colored-transparency information; and
5	(c)	a renderer coupled to the memory for blending the colored-transparency
6		information from the depth layers in a predetermined order.
1	25.	A system for transparency rendering in a graphics pipeline, comprising:
2	(a)	logic for collecting colored-transparency information from a plurality of
3		depth layers in a scene to be rendered;
4	(b)	memory for storing the collected colored-transparency information; and
5	(c)	register combiners coupled to the memory for blending the colored-
6		transparency information from the depth layers in a predetermined order.
1	26.	A method for transparency rendering in a graphics pipeline, comprising:
2	(a)	collecting colored-transparency information from at least two depth layers in
3		a scene;
4	(b)	storing the collected colored-transparency information in the form of a
5		plurality of texture maps;
6	(c)	rendering the opaque objects in the scene;
7	(d)	storing the rendering of the opaque objects in memory;
8	(e)	identifying one of the depth layers to be blended.

11	(b)	storing the collected colored-transparency information in memory; and
12	(c)	blending the colored-transparency information from the depth layers.
1	29.	A computer program product for transparency rendering in a graphics
2		pipeline, comprising:
3	(a)	computer code for collecting colored-transparency information from a
4		plurality of depth layers in a scene to be rendered by:
5		(i) executing a first rendering pass for generating a shadow map and for
6		collecting first colored-transparency information relating to a first depth
7		layer, and
8		(ii) executing additional rendering passes with a shadow mapping feature
9		enabled and from the same eye position from which the first rendering pass is
10		taken for generating additional shadow maps and for collecting additional
11		colored-transparency information elating to additional depth layers;
12	(b)	computer code for storing the collected colored-transparency information in
13		memory; and
14	(c)	computer code for blending the colored-transparency information from the
15		depth layers.
